

ABSTRACT

~~"Method for diagnosis/prognosis of breast cancer"~~

BIOMERIEUX S.A.

The present invention relates to a method for diagnosis/prognosis of breast cancer ~~comprising~~ including the following stages:

A - the nuclear material is extracted from a biological specimen, ~~—~~ B - at least one pair of amplification primers is used for obtaining amplicons of at least one target sequence of the nuclear material, ~~—~~ C —at least one detection probe is used for detecting the presence of said amplicons. ~~characterized in that, in~~ In stage B, ~~said the~~ pair of primers ~~comprises~~ includes at least one amplification primer ~~comprising~~ including at least 10 nucleotide motifs of a nucleotide sequence selected from SEQ ID No. 1 to SEQ ID No. 24 and/or in stage C, ~~said the~~ detection probe ~~comprises~~ includes at least 10 nucleotide motifs of a nucleotide sequence selected from SEQ ID No. 1 to SEQ ID No. 20. ~~—~~ The invention also relates to amplification primers and hybridization probes which can be employed in this method, as well as a kit for diagnosis/prognosis of breast cancer.
